

## High Voltage (Up to 3 kV) Thick Film Chip Resistors

### LINKS TO ADDITIONAL RESOURCES

The RCV e3 high voltage thick film chip resistors series is the perfect choice for modern electronics with high voltage requirements. Typical applications include E-meter, AC power supplies, lighting ballasts and inverters for industrial drives, aircons, and white good.

### FEATURES

- High operating voltage (up to 3 kV)
- Low voltage coefficient of resistance (VCR): 25 ppm/V
- UL 1676 recognition for RCV2010 e3 and RCV2512 e3 only; UL file no. E526561
- IEC 62368-1 ed. 3 compliant for RCV2010 e3 and RCV2512 e3 only
- Material categorization: for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

**RoHS**  
COMPLIANT  
HALOGEN  
**FREE**

### APPLICATIONS

- E-meter
- Inverters for industrial drives, aircons, and white good
- AC power supplies
- Lighting ballasts

TECHNICAL SPECIFICATIONS				
DESCRIPTION	RCV0805 e3	RCV1206 e3	RCV2010 e3	RCV2512 e3
Imperial size	0805	1206	2010	2512
Metric size code	RR2012M	RR3216M	RR5025M	RR6332M
Resistance range	100 kΩ to 10 MΩ		100 kΩ to 100 MΩ	
Resistance tolerance	± 5 %; ± 1 %			
Temperature coefficient	± 200 ppm/K; ± 100 ppm/K			
Voltage coefficient	25 ppm/V			
Rated dissipation, $P_{70}$ <sup>(1)</sup>	0.125 W	0.25 W	0.75 W	1 W
Operating voltage, $U_{max}$ , AC <sub>RMS</sub> /DC	400 V	500 V	2000 V	3000 V
Permissible film temperature, $\vartheta_F$ max. <sup>(1)</sup>	155 °C			
Operating temperature range	-55 °C to +155 °C			
Max. resistance change at $P_{70}$ for resistance range, $ \Delta R/R $ after:				
1000 h	≤ 1.0 %	≤ 1.0 %	≤ 2.0 %	≤ 2.0 %
Approval UL 1676 recognition file	-		E526561	
Approval IEC 62368-1	-		Ed. 3 approved	
Permissible voltage against ambient (insulation):				
1 min, $U_{ins}$	500 V			

### Notes

- Application-specific safety requirements may set limitations to the applicability of the specified voltage
- <sup>(1)</sup> Please refer to APPLICATION INFORMATION below

### APPLICATION INFORMATION

When the resistor dissipates power, a temperature rise above the ambient temperature occurs, dependent on the thermal resistance of the assembled resistor together with the printed circuit board. The rated dissipation applies only if the permitted film temperature is not exceeded.

These resistors do not feature a limited lifetime when operated within the permissible limits. However, resistance value drift increasing over operating time may result in exceeding a limit acceptable to the specific application, thereby establishing a functional lifetime.

TEMPERATURE COEFFICIENT AND RESISTANCE RANGE				
TYPE / SIZE	TCR	TOLERANCE	RESISTANCE	E-SERIES
RCV0805 e3	± 200 ppm/K	± 5 %	100 kΩ to 10 MΩ	E24
	± 100 ppm/K	± 1 %	100 kΩ to 10 MΩ	E24; E96
RCV1206 e3	± 200 ppm/K	± 5 %	100 kΩ to 10 MΩ	E24
	± 100 ppm/K	± 1 %	100 kΩ to 10 MΩ	E24; E96
RCV2010 e3	± 200 ppm/K	± 5 %	100 kΩ to 100 MΩ	E24
	± 100 ppm/K	± 1 %	100 kΩ to 10 MΩ	E24; E96
RCV2512 e3	± 200 ppm/K	± 5 %	100 kΩ to 100 MΩ	E24
	± 100 ppm/K	± 1 %	100 kΩ to 10 MΩ	E24; E96

PACKAGING

## DESCRIPTION

Production is strictly controlled and follows an extensive set of instructions established for reproducibility. A cermet film layer and a glass-over are deposited on a high grade (Al<sub>2</sub>O<sub>3</sub>) ceramic substrate. Specially designed inner contacts are deposited on both sides. A special laser is used to achieve the target value by smoothly fine trimming the resistive layer without damaging the ceramics. The resistor elements are covered by a protective coating designed for electrical, mechanical, and climatic protection. The terminations receive a final pure matte tin on nickel plating. The result of the determined production is verified by an extensive testing procedure on 100 % of the individual chip resistors. Only accepted products are laid directly into the tape in accordance with **IEC 60286-3 type 1a and 2a** <sup>(1)</sup>.

## ASSEMBLY

The resistors are suitable for processing on automatic SMD assembly systems. They are suitable for automatic soldering using wave, reflow or vapor phase as shown in **IEC 61760-1** <sup>(1)</sup>. The encapsulation is resistant to all cleaning solvents commonly used in the electronics industry, including alcohols, esters, and aqueous solutions. The suitability of conformal coatings, potting compounds and their processes, if applied, shall be qualified by appropriate means to ensure the long-term stability of the whole system.

The resistors are RoHS-compliant, the pure matte tin plating provides compatibility with lead (Pb)-free and lead-containing soldering processes. Solderability is specified for 2 years after production or requalification. The permitted storage time is 20 years. The immunity of the plating against tin whisker growth has been proven under extensive testing.

## MATERIALS

Vishay acknowledges the following systems for the regulation of hazardous substances:

- IEC 62474, Material Declaration for Products of and for the Electrotechnical Industry, with the list of declarable substances given therein <sup>(2)</sup>
- The Global Automotive Declarable Substance List (GADSL) <sup>(3)</sup>
- The REACH regulation (1907/2006/EC) and the related list of substances with very high concern (SVHC) <sup>(4)</sup> for its supply chain

The products do not contain any of the banned substances as per IEC 62474, GADSL, or the SVHC list, see [www.vishay.com/how/leadfree](http://www.vishay.com/how/leadfree).

## Notes

- <sup>(1)</sup> The quoted IEC standards are also released as EN standards with the same number and identical contents
- <sup>(2)</sup> The IEC 62474 list of declarable substances is maintained in a dedicated database, which is available at <http://std.iec.ch/iec62474>
- <sup>(3)</sup> The Global Automotive Declarable Substance List (GADSL) is maintained by the American Chemistry Council and available at [www.gadsl.org](http://www.gadsl.org)
- <sup>(4)</sup> The SVHC list is maintained by the European Chemical Agency (ECHA) and available at <http://echa.europa.eu/candidate-list-table>

Hence the products fully comply with the following directives:

- 2000/53/EC End-of-Life Vehicle Directive (ELV) and Annex II (ELV II)
- 2011/65/EU Restriction of the Use of Hazardous Substances Directive (RoHS) with amendment 2015/863/EU
- 2012/19/EU Waste Electrical and Electronic Equipment Directive (WEEE)

Vishay pursues the elimination of conflict minerals from its supply chain, see the Conflict Minerals Policy at [www.vishay.com/doc?49037](http://www.vishay.com/doc?49037).

## APPROVALS

Where applicable, the resistors are tested in accordance with **EN 140401-802** which refers to **EN 60115-1, EN 60115-8** and the variety of environmental test procedures of the **IEC 60068** <sup>(1)</sup> series.

Products RCV2010 e3 and RCV2512 e3 only, are additionally tested in accordance with UL 1676 and IEC 62368-1, ed. 3.

Recognition by Underwriter Laboratories Inc. is indicated by the UL logo on the package label.

For tighter precision specification, automotive high voltage thin film, please refer to latest edition of MMA 0204 HV AT, MMB 0207 HV AT, Precision Automotive High Voltage Thin Film MELF Resistors datasheet, [www.vishay.com/doc?28951](http://www.vishay.com/doc?28951).

**DERATING**

**NOMINAL OPERATING VOLTAGE**

The permissible operating voltage  $U_{max}$  equals the rated voltage.  
 For ambient temperatures above 70 °C power derating must be considered

**TESTS AND REQUIREMENTS**

All executed tests are carried out in accordance with the following specifications:

- EN 60115-1, generic specification
- EN 60115-8, sectional specification
- EN 140401-802, detail specification
- IEC 60068-2-xx, test methods
- UL 1676 - Conductive-Path and Discharge-Path Resistors
- IEC 62368-1 Audio / Video, Information and Communication Technology Equipment, Part 1: Safety Requirements ed. 3

The parameters stated in the “Test Procedures and Requirements” table are based on the required tests and permitted limits of EN 140401-802. The table presents only the most important tests, for the full test schedule refer to the documents listed above. However, some additional tests and a number of improvements against those minimum requirements have been included.

The testing also covers most of the requirements specified by EIA/IS-703 and JIS-C-5201-1.

The tests are carried out under standard atmospheric conditions in accordance with IEC 60068-1, 4.3, whereupon the following values are applied:

- Temperature: 15 °C to 35 °C
  - Relative humidity: 25 % to 75 %
  - Air pressure: 86 kPa to 106 kPa (860 mbar to 1060 mbar)
- A climatic category LCT / UCT / 56 is applied, defined by the lower category temperature (LCT), the upper category temperature (UCT), and the duration of exposure in the damp heat, steady state test (56 days).

TEST PROCEDURES AND REQUIREMENTS
